DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of claims 1-10 in the reply filed on 03/24/05 is acknowledged.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Martin et al. (US publication 2004/0099893).

With respect to claim 1, Martin et al. teach a ferroelectric memory structure, comprising (see figs. 3-6 and associated text):

a substrate 302;

an insulating layer 402 formed on said substrate;

a plurality of oxide electrodes 406 formed on said insulating layer;

a ferroelectric layer 408 formed on said insulating layer and said plurality of oxide electrodes; an

a plurality of metallic electrodes formed on said ferroelectric layer and corresponding to said plurality of said oxide electrodes.

With respect to claims 2, 3, 4, Martin et al. further teach the substrate is n or p silicon substrate.

Art Unit: 2814

With respect to claim 5, the use of BaTiO₃ as insulating material is well-known.

With respect to claim 6, the use of MgO as insulating material is well-known.

With respect to claims 7 and 9, Martin et al. further teach the metallic electrodes are made of Pt and the plurality of oxide electrodes are made of LaNiO₃.

With respect to claim 8, Martin et al. further teach the ferroelectric layer comprises of Bi, La, Ti, and O but fail to teach the relative concentrations of Bi, La, Ti, and O in ferroelectric layer.

However, the applicant does not appear to show that the relative concentration of Bi, La, Ti, and O in ferroelectric layer would produce any unexpected results or benefits. It would have been obvious to one skilled in the art to determine the relative concentrations through routine optimization process.

Allowable Subject Matter

3. Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
